

*Manzanita* 

## Turf Type Tall Fescue

In cooperation with Rutgers and Peak Plant Genetics, VSP has released an exciting new tall fescue, Manzanita (tested as PPG-TF257). A new generation tall fescue, Manzanita has been selected for a spreading growth habit, as well as tolerance to lower mowing and summer stress tolerance.

### **Adaptation:**

Entered into the 2018 tall fescue NTEP, first official NTEP data expected in spring 2020. Early reports indicate it's one of the top varieties in the trials.

2018 and 2019 early Rutgers NTEP data showed good establishment and gray leaf spot resistance. Great turf quality (it's ranked in the top 10 in a test of 134 newer varieties) with a medium dark green color, finer leaf texture and above average density. In Oregon trials it's also exhibited outstanding turf quality and is a top variety in Oregon trials.
